

Fitch Upgrades BBVA-6 FTPYME, FTA Ratings Endorsement Policy

02 Sep 2013 11:52 AM (EDT)

Fitch Ratings-London-02 September 2013: Fitch Ratings has upgraded BBVA-6 FTPYME, FTA's notes, as follows:

EUR33.8m Class A1 (ISIN ES0370460000): upgraded to 'A-sf' from 'BBB+sf'; Outlook Stable
EUR56.5m Class A2(G) (ISIN ES0370460018): upgraded to 'A-sf' from 'BBB+sf'; Outlook Stable
EUR50.3m Class B (ISIN ES0370460026): affirmed at 'CCCs'; revised RE to 40% from 80%
EUR32.3m Class C (ISIN ES0370460034): affirmed at 'Cs'; RE 0%

KEY RATING DRIVERS

The upgrade of the senior notes reflects the increase of their credit enhancement from 22% to 34% since the last review in September 2012. This has been enabled by the amortisation of the class A1 and class A2(G) notes, which currently represent 2.8% and 26.24% of their initial balances, respectively. The amortisation of the class A2(G) notes is supported by roughly EUR18m that has been drawn from the state guarantee at the time of the review. As the reserve fund has been depleted since 2009, a principal deficiency ledger has built up, which now represents EUR28m taking into account the outstanding drawn amount under the state guarantee.

The overall performance has been stable over the past year. Loans delinquent over 90 days represent 3.8% of the outstanding balance and over 180 days 2.97%. In absolute terms 90 plus day delinquencies decreased, whereas 180 plus day delinquencies increased, indicating that the 90 plus arrears rolled over to the 180 days arrears. Current defaults increased by EUR4m to EUR58m.

The weighted average recovery rate has hardly increased since the review and stagnated at its current level of 35%. The uncertainty related to the timing of incoming recoveries and their amounts prevented a further upgrade. Low recoveries have also led to the reduction of the Recovery Estimate on the class B notes to 40%.

RATING SENSITIVITIES

Fitch included stress tests in its analysis to determine the transaction's sensitivity to a change in the underlying assumptions. The first stress test addressed a reduction of the recovery rate by 25%, whereas the second stress test simulates an increase in default probabilities by 25%. The results suggest that in either scenario a downgrade of the senior notes could be triggered.

Due to the transaction's exposure to BBVA (BBB+/Negative) as servicer, payment interruption is a risk if BBVA ceases to exist. As a consequence, the transaction's ratings are capped at 'Asf'.
