Banco Bilbao Vizcaya Argentaria, S.A. as subordinated credit facility provider, interest swap counterparty, GIC provider, transaction account provider, and collection account provider	AA-/Stable/A-1+			

Transaction Key Features				
Expected closing date	Nov. 30, 2006			
Collateral	Portfolio of unsecured consumer loans granted to Spanish residents			
Principal outstanding (Mil. €)	1,793.6			
Country of origination	Spain			
Concentration	Andalucia (20.98%), Catalonia (15.90%), Valencia (12.42%), and Madrid (10.64%)			
Average loan size balance (€)	8,113.69			
Number of loans at closing	221,057			
Loan size range (€)	500-63,935.43			
Weighted-average seasoning (months)	12.55			
Weighted-average asset remaining term (years)	5.93			
Weighted-average interest rate (%)	7.22			
Redemption profile	Fully amortizing			
Excess spread at closing	3.25% guaranteed by swap			
Revolving period	From March 20, 2007 to Sept. 20, 2008			

Transaction Summary

Standard & Poor's Ratings Services has assigned preliminary ratings to the €1.5 billion asset-backed floating-rate notes to be issued by BBVA Consumo 2 Fondo de Titulización de Activos, an SPE.

This is a securitization of Spanish unsecured consumer loans. Table 1 summarizes the key features of the notes.

Table 1: Note Summary			
Settlement	Euroclear and Iberclear		
Governing law	Spanish		
Note amount	€100,000		
Business day convention	Actual/360, TARGET, and Madrid business days		
Listing	AIAF Mercado de Renta Fija, Madrid, Spain		
Clean-up call	When the aggregate principal amount of outstanding loans is less than 10% of the aggregate issue amount, subject to certain conditions		
Legal maturity date	Dec. 20, 2020		

The originator of the loans is Banco Bilbao Vizcaya Argentaria, S.A. (BBVA), one of the primary lenders in the Spanish financial arena. The portfolio to be securitized consists of unsecured loans, either performing or in arrears up to 30 days, made to individuals resident in Spain. The average loan size is $\textcircled{(3,1)}{(3,1)}$.

The portfolio to be securitized accounts for approximately 35% of BBVA's total consumer loan portfolio (excluding other types of financing offered by the BBVA group) and was originated between January 1999 and September 2006.

The loans were originated by BBVA, which has a multi-channel consumer loan origination strategy. Loans are originated through two channels:

- Branch network: There are 3,578 BBVA branches in Spain and these are the main selling points for consumer loans (approximately 97% of total consumer loan origination).
- Prescription centers network: The network is made up of 44 broker centers that centralize the loans originated by third parties such as retail stores (approximately 3% of total consumer loan origination).

BBVA has a telephone credit line called "El Creditón" and an online feature called "Clice internet" that attract new business. Although these do not generate any loans, they refer interested parties to the branch network.

Notable Features

This is BBVA's fourth unsecured consumer loans transaction. It follows two recent consumer loan transactions, BBVA Autos 2 Fondo de Titulización de Activos and BBVA Consumo 1 Fondo de Titulización de Activos.

In this transaction, the collateral comprises general consumer loans. BBVA is active in the securitization market and BBVA Consumo 2 is BBVA's 13th securitization. It closely tracks the recent BBVA Consumo 1 transaction that closed in April 2006.

The key features of this transaction include:

- The swap counterparty will pay the servicing fee;
- There is a one-year and 10 months revolving period, during which any principal collections will be used to purchase new loans, subject to eligibility criteria; and
- The weighted-average seasoning is lower in this transaction than in the previous one.

Strengths, Concerns, And Mitigating Factors

Strengths

- BBVA is one of the leading lenders in the Spanish loan market and a strong and experienced servicer.
- The pool is diversified and granular with 221,057 loans and an average loan size of €8,113.69. There is limited geographic concentration risk as no single region in Spain accounts for more than 25% of the collateral.
- The weighted-average interest rate is relatively high at 7.22%.
- Between January 1999 and January 2006, Standard & Poor's received quarterly cumulative default, cumulative recovery, and prepayment data on the collateral to be securitized.
- Principal collections can be used to pay interest on all classes. However, in some circumstances, payment of class B and C note interest will be subordinated to a lower position in the priority of payments.
- The payment structure and the credit structure (subordination, excess spread, and cash reserve) of the transaction are considered adequate for the ratings assigned.
- The transaction will be able to achieve a high level of recoveries as most borrowers are existing BBVA customers. If a borrower defaults, funds can be recovered swiftly by capturing them in the borrower's bank accounts.

Concerns

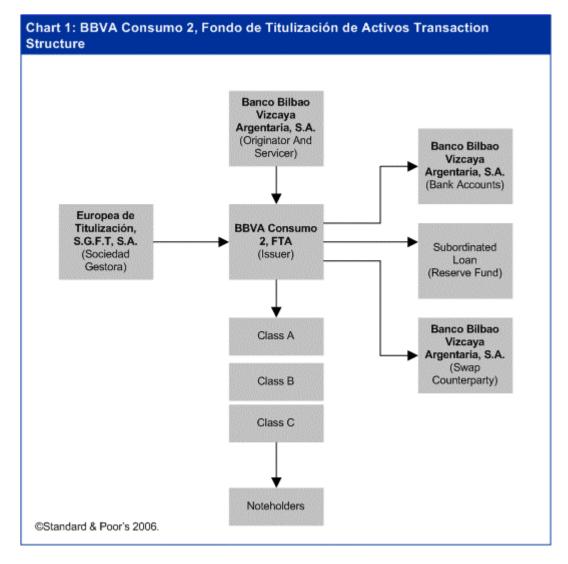

- There is a revolving period of one year and 10 months, which can potentially alter the credit quality and characteristics of the portfolio.
- The cash reserve is amortizing, which results in a potential reduction of credit enhancement when the structure may need it. For example, if the pool experiences high prepayments, there may be a risk of adverse selection, so that loans of a lesser credit quality will comprise more of the pool than at closing.
- At closing, some of the loans may be up to 30 days in arrears.
- The loans pay a fixed rate of interest but the notes pay a floating rate of interest.
- BBVA is a deposit-taking institution and all borrowers hold an account at BBVA. This gives rise to potential set-off issues if BBVA becomes insolvent.
- Collections from the securitized portfolio are collected into the same account as the non-securitized loan collections.
- Prepayments on unsecured consumer loans can be high, e.g., if there is a positive change in the borrower's financial situation or if there is increased competition that could lead to a higher number of consumers refinancing their existing loans.
- Some of the loans in the preliminary pool are in a payment holiday period (paying interest but no principal).

Mitigating factors

- The eligibility criteria will ensure that the characteristics of the portfolio remain within established parameters during the revolving period. The individual loan and portfolio-wide eligibility criteria are quite protective and prevent pool quality deterioration during the revolving period (see *"Transaction Structure"*).
- The cash reserve will not amortize for the first two years of the transaction. It will not reduce when arrears exceed 1% or if the cash reserve is not at its required level on the previous interest payment date. Standard & Poor's has taken into account this structural feature in its cash flow analysis.
- Of the provisional pool, 6.28% is in arrears up to 30 days, which is relatively low, and these arrears are considered to be "technical". Of the provisional pool, 85.74% is performing.
- The issuer and BBVA will enter into an interest rate swap agreement to hedge against any interest rate mismatch.
- There are structural features in the transaction that mitigate set-off risk and there are no employee loans in the portfolio.
- Collections from the securitized portfolio are collected into BBVA's account and transferred weekly to a segregated account in the issuer's name at BBVA. Furthermore, commingling has been stressed in the cash flow analysis.
- Prepayments were factored into the cash flow analysis.
- The percentage of the pool for loans in a payment holiday period is relatively low (around 6.6%). Additional loans added to the pool in the revolving period cannot include this feature, so the percentage of the pool in payment holidays will not increase.

Transaction Structure

On the closing date, the issuer will purchase a portfolio of unsecured consumer loan receivables with an outstanding balance of a.5 billion. It will issue three classes of notes to the capital markets (see chart 1). All the notes will pay interest at the end of every quarter at three-month EURIBOR plus a class-specific margin yet to be determined.

Revolving period and early amortization

There is a revolving period, which will begin on March 20, 2007 and end on Sept. 20, 2008, inclusive. During this time, all principal proceeds will be used to purchase new assets for the pool. The revolving period will terminate early if:

- Cumulative delinquencies (loans in arrears more than 90 days) are greater than 1.5% of the outstanding balance of the assets;
- The cumulative defaults (loans that are 12 months past due) since closing exceed (i) a target derived from the straight line interpolation between 0.333% and 2.331% of the original collateral balance, or (ii) 2.000% of original collateral balance;
- The reserve fund is not at its required amount;
- There is a termination under the swap and no replacement, guarantor, or alternative solution can be found within 15 business days;
- BBVA becomes insolvent; or
- BBVA is substituted as servicer.

If any of the above events occur, the revolving period will be terminated and the issuer will use all the principal collections to redeem the notes sequentially.

Eligibility criteria

During the revolving period, the issuer can purchase additional underlying loans. These underlying loans are subject to individual and pool eligibility criteria tests. For individual loans, the main eligibility criteria are as follows:

- The borrower must be an individual and a Spanish resident.
- Loans must be denominated in euros and pay a fixed interest rate.
- The maturity of the underlying loan must not fall after Oct. 31, 2018.
- A minimum of one installment must have been paid and there must be no pending arrears.
- Each loan must have a minimum remaining life of 12 months.
- The obligor must not be an employee of BBVA.
- The loan size must be between €500 and €5,000.
- All of the loans must be paid by direct debit.
- Loans in a payment holiday period (paying interest but no principal) cannot be added to the portfolio.

On a portfolio basis, the eligibility criteria are as follows:

- The weighted-average seasoning of the pool must be equal to or greater than six months.
- The weighted-average seasoning of the additional pool must be equal to or greater than three months.
- The weighted-average interest of the pool must be equal to or greater than 5%.
 - The weighted-average life of the additional pool must be less than 3.85 years (assuming a CPR of 0%).
- The weighted-average life of the pool must be less than seven years.
- Maximum concentration in a single Spanish autonomous community must not exceed 25% and in the three largest it must not exceed 60% (see chart 2 for existing concentrations).
- The maximum concentration per single borrower must be 0.01%.

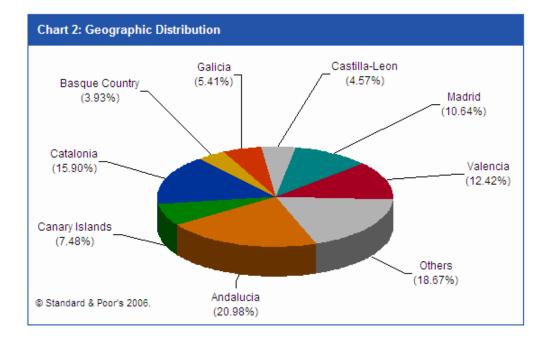

Collateral Description

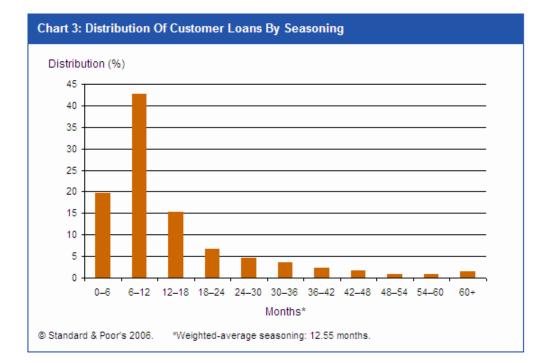

Key features of the provisional collateral pool are described in table 2.

Table 2: Provisional Pool Data As At Nov. 4, 2006			
Number of receivables	221,057		
Aggregate principal balance (Mil. €)	1,793.59		
Average principal balance (€)	8,113.69		
Weighted-average seasoning (months)	12.55		
Weighted-average interest rate (%)	7.22		
Range of interest rates (%)	3.00 to 12.37		

The provisional pool comprises unsecured loans made to individuals resident in Spain. The loans are originated and serviced by BBVA. All loans in the provisional pool (and to be included in the final pool) are fully amortizing, monthly-installment loans.

All loans pay a fixed rate of interest, with most paying between 6% and 8%. The weighted-average interest rate is 7.22%. In this transaction, a minimum weighted-average interest rate of 5% is a condition of the loan purchases. Charts 2 to 5 show certain characteristics of the collateral pool.

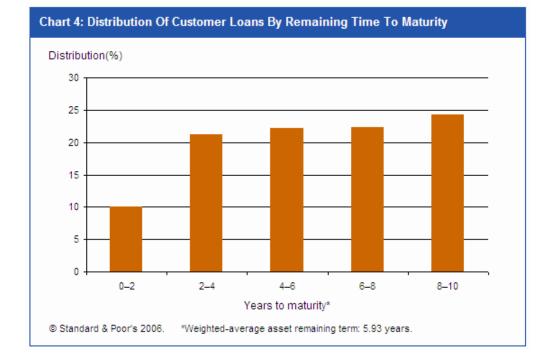

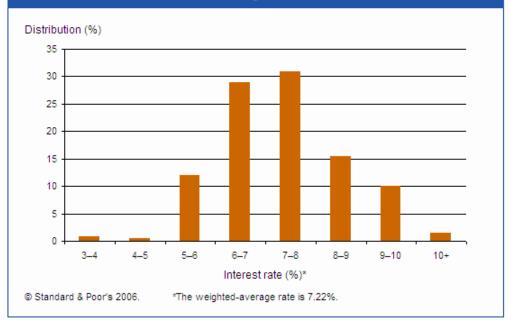

Chart 5: Distribution Of Customer Loans By Interest Rate

Credit Structure

Interest rates

The loans pay monthly based on an interest rate that is fixed from the point of origination. The notes will pay based on three-month EURIBOR plus a margin to be determined.

Cash collection and transaction accounts

All borrowers will pay monthly into the collection account held at BBVA. All collected amounts belonging to the Fondo will be transferred daily with a seven-day delay into an account in the name of the Fondo at BBVA called the treasury account ("*Cuenta de Tesorería*"). There will also be a GIC ("*Cuenta de Principales*") held at BBVA in the name of the Fondo, which will house the available principal deposit amounts that are not used to purchase additional consumer loans during the revolving period (see "*Downgrade Language*").

Subordinated loan

BBVA will provide a subordinated loan to fund the reserve fund. The amounts standing to the reserve fund will be held at the treasury account held in the name of the Fondo at BBVA. The reserve fund can be drawn on interest payment dates to cover the Fondo's senior fees and expenses, and interest and principal on all classes of notes.

At closing, the subordinated loan funding the reserve fund will be 1.56% of the note balance, and on each interest payment date it will be the lower of:

- 1.56% of the initial note balance; and
- The greater of: (i) 3.12% of the outstanding note balance, and (ii) 0.78% of the initial note balance (i.e., €1.700 million).

There will not be a reduction in the amount of the subordinated loan in the first two years, if arrears are greater than 1% of the outstanding balance of the performing loans, and if the reserve fund, if formed, is not at its required level.

Initial expenses loan

BBVA will provide an initial expenses subordinated loan on the closing date that will fund the initial expenses that arise to constitute the fund, and to issue and list the notes.

Interest swap agreement

Due to the fixed rate payable on the underlying loans and the floating rate payable on the notes, BBVA will provide an interest rate swap to mitigate any interest rate mismatch risk.

Under the terms of the swap, the Fondo will pay all interest received on the portfolio to the swap counterparty and will receive:

- The three-month EURIBOR rate, plus the weighted-average spread of the notes, plus 3.25% on the notional amount which is equal to the balance of the performing loans and loans in arrears up to 90 days;
- During the revolving period, an amount covering the difference between the coupon paid on the notes and the interest yielded by the principal account (to cover negative carry); and
- The portfolio's administration and servicing fee.

Given that the swap counterparty will also be paying the servicing fee, if BBVA is no longer swap counterparty, a replacement must be found that will enter into the swap on the same terms, and BBVA must bear any replacement cost.

Priority of payments

Funds available on each interest payment date will include principal and interest from the portfolio, amounts standing to the credit of the Fondo's accounts, the cash reserve, net amounts from the swap, and any other amounts belonging to the Fondo. These amounts will be applied in the following order:

- Senior fees and expenses;
- Swap amounts (excluding termination costs if the swap counterparty is the defaulting party);
- Interest on the class A notes;
- Interest on the class B notes, unless deferred;
- Interest on the class C notes, unless deferred;
- Amortization amount of the notes;
- Payment of the class B note interest, if deferred;
- Payment of the class C note interest, if deferred;
- Reserve fund replenishment; and
- Residual payments to the seller.

Deferral of the class B note interest to a lower position in the priority of payments will occur if the cumulative gross default ratio is greater than 12.25%. The same applies to the class C note interest if the cumulative gross default ratio is greater than 10%.

The notes redeem by an amount equal to the outstanding balance of the respective classes of notes and the outstanding balance of the non-defaulted assets.

During the revolving period, the amortization amount will be used to purchase at par additional assets.

Amortization of the notes

Subsequent to the revolving period ending in Sept. 20, 2008 inclusive, the notes will amortize sequentially.

Clean-up call

As is usual in Spanish RMBS transactions, the fund manager (Europea de Titulización) may, after having notified the CNMV (the Spanish capital markets' regulatory body) and Standard & Poor's, terminate the transaction from the payment date on which the aggregate principal amount of outstanding loans is lower than 10% of the aggregate issue amount.

Redemption of the notes

The notes will redeem in full on the final interest payment date in December 2020.

Downgrade Language

Transaction account and GIC provider

If the short-term rating on BBVA as GIC and transaction account provider falls below 'A-1' then, within 30 days, BBVA must:

- Obtain a joint and several first demand guarantee in favor of the issuer from an entity with a short-term rating of at least 'A-1'; or
- Transfer the funds of the cash account to an institution whose short-term rating is at least 'A-1'.

If neither of these options is possible, it must obtain from the financial agent or a third party, collateral security in favor of the fund on financial assets. The collateral security must have a credit quality better than or equal to the Spanish state government debt, in an amount sufficient to guarantee the commitments established in the financial services agreement, subject to confirmation by Standard & Poor's.

If none of the above measures is achieved, the trustee must replace the financial agent with another credit entity whose short-term debt must have a credit rating of at least 'A-1'.

If the amounts held in the GIC with BBVA exceed 20% of the outstanding balance of the notes, the excess must be deposited in an account for excess funds held at an entity rated 'A-1+'.

Swap counterparty

If the short-term rating on BBVA as swap counterparty is lowered below 'A-1', it has 30 days to find a substitute with a short-term rating of at least 'A-1', find a guarantor with a short-term rating of at least 'A-1', or post collateral complying with Standard & Poor's requirements.

If the long-term rating on the swap counterparty is lowered below 'BBB-', it has to be substituted by a new counterparty with a short-term rating of at least 'A-1' within five business days. Any replacement costs will be paid by BBVA.

Standard & Poor's Stress Test

The analysis of the underlying portfolio was carried out in accordance with Standard & Poor's criteria for analyzing consumer-loan assets. Standard & Poor's was presented with quarterly cumulative default, cumulative recovery, and prepayment data on the collateral pool over a period of six years (from January 1999 to December 2005).

Defaults and recoveries

For each type of asset, Standard & Poor's analyzed historical gross defaults using the consumer asset-backed default modeling methodology to derive base-case assumptions, and applied rating-specific multiples to these base-case levels (see "*Default Modeling for European Consumer Asset-Backed Securitizations*" in "*Criteria Referenced*").

Credit was given to seasoning in the default determination, as there is an eligibility criterion in the transaction requiring that the weighted-average seasoning of the portfolio must be at least six months. Standard & Poor's has applied rating-specific haircuts to historical recovery data for unsecured loans.

Key Performance Indicators

Continual surveillance will be maintained on the transaction until the notes mature or are otherwise retired. To do this, regular servicer reports detailing the performance of the underlying collateral will be analyzed, supporting ratings will be monitored, pool cuts will be assessed, and regular contact will be made with the *gestora* to ensure that minimum servicing standards are being sustained and that any material changes in the servicer's operations are communicated and assessed.

Some of the key indicators analyzed will be:

- Arrears levels, especially the cumulative ratio of loans that are three months past due;
- The cumulative default ratio;
- Collateral prepayment levels and the ability to source and reinvest in suitable collateral; and
- The evolution of the ratings on the supporting parties.
