BBVA acts as the account bank for the eight transactions. Based on the account bank reference rating of BBVA at A (high), which is one notch below the DBRS Morningstar public Long-Term Critical Obligations Rating (COR) of AA (low), the downgrade provisions outlined in the transaction documents, and other mitigating factors inherent in the transaction's structure, DBRS Morningstar considers the risk arising from the exposure to the account bank to be consistent with the ratings assigned to the Notes, as described in DBRS Morningstar's "Legal Criteria for European Structured Finance Transactions" methodology. However, the downgrade provisions outlined in the BBVA RMBS 12 FTA transaction documents do not fully de-link the Series A Notes rating from the rating of the account bank. In other words, a material downgrade of the account bank's ratings could lead to a downgrade of the Series A Notes.

DBRS Morningstar analysed the transactions structures in Intex DealMaker.

The Coronavirus Disease (COVID-19) and the resulting isolation measures have caused an economic contraction, leading to sharp increases in unemployment rates and income reductions for many borrowers. DBRS Morningstar anticipates that delinquencies may arise in the coming months for many RMBS transactions, some meaningfully. The ratings are based on additional analysis and adjustments to expected performance as a result of the global efforts to contain the spread of the coronavirus.

On 16 April 2020, the DBRS Morningstar Sovereign group published its outlook on the impact to key economic indicators for the 2020-22 time frame. For details see the following commentaries: <https://www.dbrsmorningstar.com/research/359679/global-macroeconomic-scenarios-implications-for-credit-ratings> and <https://www.dbrsmorningstar.com/research/359903/global-macroeconomic-scenarios-application-to-credit-ratings>. The DBRS Morningstar analysis considered impacts consistent with the moderate scenario in the referenced reports.

To assess the impact of changing the transaction parameters on the ratings, DBRS Morningstar considered the following stress scenarios, as compared to the parameters used to determine the rating (the Base Case):

- DBRS Morningstar expected a lifetime base case PD and LGD for the pool based on a review of the current assets. Adverse changes to asset performance may cause stresses to base case assumptions and therefore have a negative effect on credit ratings.
- For BBVA RMBS 5 FTA, DBRS Morningstar updated its PD and LGD assumptions to 18.7% and 56.8%, respectively, for the A (high) (sf) rating level, to 14.2% and 52.7%, respectively, for the BBB (high) (sf) rating level and to 9.6% and 49.7%, respectively, for BB (high) (sf) rating level.
- For BBVA RMBS 9 FTA, DBRS Morningstar updated its PD and LGD assumptions to 19.6% and 59.7%, respectively, for the A (high) (sf) rating level.
- For BBVA RMBS 10 FTA, DBRS Morningstar updated its PD and LGD assumptions to 17.2% and 54.7%, respectively, for the A (high) (sf) rating level and to 13.0% and 50.5%, respectively, for the BBB (high) (sf) rating level.
- For BBVA RMBS 11 FTA, DBRS Morningstar updated its PD and LGD assumptions to 21.8% and 55.1%, respectively, for A (high) (sf) rating level, to 17.0% and 51.0%, respectively, for the BBB (high) (sf) rating level and to 11.1% and 46.9%, respectively, for the BB (sf) rating level.
- For BBVA RMBS 12 FTA, DBRS Morningstar updated its PD and LGD assumptions to 18.0% and 49.1%, respectively, for the A

(high) (sf) rating level and to 13.6% and 44.1%, respectively, for the BBB (high) (sf) rating level.

-- For BBVA RMBS 13 FTA, DBRS Morningstar updated its PD and LGD assumptions to 18.2% and 52.6%, respectively, for the A (high) (sf) rating level and to 13.8% and 48.0%, respectively, for the BBB (high) (sf) rating level.

-- For BBVA RMBS 15 FTA, DBRS Morningstar updated its PD and LGD assumptions to 16.4% and 46.0%, respectively, for the A (high) (sf) rating level.

-- For BBVA RMBS 16 FT, DBRS Morningstar updated its PD and LGD assumptions to 20.5% and 46.6%, respectively, for the A (high) (sf) rating level.

-- The Risk Sensitivity overview below illustrates the ratings expected if the PD and LGD increase by a certain percentage over the base case assumption. For example, if the LGD of BBVA RMBS 5 FTA increases by 50%, the rating of the Series A notes would be expected to remain at A (high) (sf), assuming no change in the PD. If the PD of BBVA RMBS 5 FTA, increases by 50%, the rating of the Series A would be expected to remain at A (high) (sf), assuming no change in the LGD. Furthermore, if both the PD and LGD increase by 50%, the rating of the Series A would be expected decrease to A (low) (sf).
