Fitch Affirms Valencia Hipotecario Series

Fitch Ratings-London-24 July 2015: Fitch Ratings has affirmed the Valencia Hipotecario series, three Spanish RMBS transactions originated by Banco de Valencia (now CaixaBank, S.A.; BBB/Positive/F2).

A full list of rating actions is at the end of this rating action commentary.

KEY RATING DRIVERS

Stable Performance

The affirmations reflect the robust performance of the securitised portfolios. Cumulative gross defaults remain limited and stand at between 0.4% (VH1) and 2.8% (VH3) of the initial pool, an increase of between 12bp (VH1) and 39bp (VH3) compared with 12 months ago. Late stage arrears (mortgages with at least three monthly payments overdue) show marginal improvements, currently between 0.8% (VH1) and 1.3% (VH2) of the current pool, a decrease of between 15bp (VH1) and 66bp (VH2) compared with 12 months ago. Both indicators are below Fitch's Spanish RMBS index, where gross defaults and late stage arrears are 5% and 1.5%, respectively.

While Fitch views the performance of all three transactions as above average compared with the Fitch-rated Spanish RMBS portfolio, the agency notes that the performance of VH1 has been stronger than that of VH2 and VH3. Fitch believes that this is due to the higher seasoning of the deal (the average year of origination in VH1 is 2001, compared with 2004 in VH3's case), stronger borrower financial condition as measured by the weighted average debt to income ratio (47.7% in VH1, compared to 62.4% and 72.7% in VH2 and VH3, respectively), and lower exposure to adverse borrower and loan characteristics such as mortgage tenors beyond 30 years (4.19% in VH1 compared to 16.86% and 29.85% in VH2 and VH3, respectively).

Reserve Fund Replenishments

The transactions' structures allow for the full provisioning of defaulted loans, which are defined as loans in arrears by more than 18 months. Since January 2015, gross excess spread and recoveries have been sufficient to fully cover period defaults, leading to replenishments of the respective reserve funds. As of June 2015 the cash reserves of VH1, VH2 and VH3 were between 84.9% (VH3) and 99.9% (VH1) of the respective target levels.

Sufficient Credit Enhancement (CE)

VH1 may switch to pro-rata in the next 12 months as the relevant triggers are close to being met. We do not expect the necessary pro-rata triggers to be met for the other deals in the near future. However, Fitch believes that available CE is sufficient to withstand the associated rating stresses, which is reflected in the affirmations.

Maturity Extensions

Fitch has analysed the extent of maturity extensions that have taken place. The peak in number of maturity extensions occurred during 2010-2012. Since then, the yearly number of maturity extensions has decreased substantially. We have accounted for this by classifying all loans subject to maturity extensions as loans in arrears for more than three months, and thus increased their probability of default. The additional stress applied to these loans had no material effect on our view of the current credit support available to the rated tranches, as reflected in their affirmation.

Strong House Price Decline

Fitch's analysis of the properties in the underlying portfolios, suggest high degree of concentration in the Valencia region, where price declines over the past years have been above the Spanish national average. As a result, recoveries from the sale of properties taken into possession have been limited. This has been taken into consideration in our analysis by stressing our distressed sale discount assumption (or quick sale adjustment), and hence reducing the expected recoveries.

Payment Interruption Risk

The current reserve fund levels provide sufficient liquidity to cover at least six months of senior fees and interest on the senior notes in case of default of the servicer or the collection account bank.

RATING SENSITIVITIES

Deterioration in asset performance may result from economic factors, in particular the increasing effect of unemployment. A corresponding increase in new defaults and associated pressure on excess spread levels and reserve funds could result in negative rating action.

DUE DILIGENCE USAGE

No third party due diligence was provided or reviewed in relation to this rating action.

DATA ADEQUACY

Fitch has checked the consistency and plausibility of the information it has received about the performance of the asset pools and the transactions. There were no findings that were material to this analysis. Fitch has not reviewed the results of any third party assessment of the asset portfolio information or conducted a review of origination files as part of its ongoing monitoring.

Fitch did not undertake a review of the information provided about the underlying asset pools ahead of the transactions' initial closing. The subsequent performance of the transactions over the years is consistent with the agency's expectations given the operating environment and Fitch is therefore satisfied that the asset pool information relied upon for its initial rating analysis was adequately reliable.

Overall, Fitch's assessment of the information relied upon for the agency's rating analysis according to its applicable rating methodologies indicates that it is adequately reliable.

Sources of Information:

The information below was used in the analysis.

-Loan-by-loan data provided by European Data Warehouse as at May 2015 in VH1, and April 2015 in VH2 and VH3.

-Transaction reporting provided by Europea de Titulizacion SGFT, S.A. as at April 2015 in VH1 and VH2, and June 2015 in VH3.

- Maturity extension provided by Europea de Titulizacion SGFT, S.A. with a cut-of date of 31 March 2015

- Information on repossessed properties provided by Europea de Titulizacion SGFT, S.A. with a cut-of date of 31 March 2015
