Spanish RMBS Hipocat 9 Class B And D Notes Upgraded Following Review; Class A2a, A2b, And C Notes Affirmed

September 23, 2022

- Hipocat 9 is a Spanish RMBS transaction that closed in November 2005 and securitizes first-ranking mortgage loans. Catalunya Banc--formerly named Catalunya Caixa and now part of BBVA--originated the pool, which comprises loans secured over owner-occupied properties, mainly located in Catalonia.
- We raised our ratings on Hipocat 9's class B and D notes. At the same time, we affirmed our ratings on the class A2a, A2b, and C notes.

MADRID (S&P Global Ratings) Sept. 23, 2022--S&P Global Ratings today raised its credit ratings on Hipocat 9, Fondo de Titulizacion de Activos' class B notes to 'AAA (sf)' from 'AA+ (sf)' and class D notes to 'BBB- (sf)' from 'BB (sf)'. At the same time, we affirmed our 'AAA (sf)' ratings on the class A2a and A2b notes and our 'BBB+ (sf)' ratings on the class C notes.

Today's rating actions reflect our full analysis of the most recent information provided and the transaction's current structural features.

As per our global RMBS criteria, our weighted-average foreclosure frequency assumptions decreased because of the transaction's reduction in arrears. In addition, our weighted-average loss severity (WALS) assumptions have risen due to an increase on our RMVD Repossession market value decline assumptions (RMVD).

Table 1

Credit Analysis Results

Rating	WAFF (%)	WALS (%)	Credit coverage (%)
AAA	16.33%	33.50%	5.47%
AA	11.26%	28.71%	3.23%
A	8.70%	20.47%	1.78%
BBB	6.65%	15.99%	1.06%
BB	4.47%	12.90%	0.58%
B	2.94%	10.12%	0.30%

WAFF--Weighted-average foreclosure frequency. WALS--Weighted-average loss severity.

Loan-level arrears are low at 1.68%. Overall delinquencies remain well below our Spanish RMBS

index (see "Related Research"). Cumulative defaults, defined as loans in arrears for a period equal to, or greater than, 18 months, represent 11.16% of the closing pool balance.

Our operational and legal risk analyses remain unchanged since our previous review. Therefore, the ratings are not capped by any of these criteria.

The servicer, Banco Bilbao Vizcaya Argentaria S.A. (BBVA), has a standardized, integrated, and centralized servicing platform. It is a servicer for many Spanish RMBS transactions.

The available credit enhancement in Hipocat 9 has decreased since our previous review. This is because the reserve fund, which was replenished to its target level in April 2022, met all the amortization conditions on the July 2022 interest payment date (IPD). Therefore, it amortized to its floor level of €8 million, resulting in a marked decrease of credit enhancement.

Additionally, we applied our counterparty criteria as part of our analysis of this transaction (see "Related Criteria"). BBVA provides the interest rate swap contract, which is in line with our previous counterparty criteria. As per our methodology, considering the collateral arrangement's enforceability, the maximum supported rating is 'A+', unless we delink our ratings on the notes from those on the counterparty. Our ratings on the class A2a, A2b, and B notes are delinked from the swap counterparty.

Our credit and cash flow results indicate that the credit enhancement available for the class A2a and A2b notes is still commensurate with our 'AAA (sf)' rating. We therefore affirmed our 'AAA (sf)' ratings on the class A2a and A2b notes.

Additionally, we raised to 'AAA (sf)' from 'AA+ (sf)' our ratings on the class B notes.

At the same time, we affirmed our 'BBB+ (sf)' rating on the class C notes and raised to 'BBB- (sf)' from 'BB (sf)' our ratings on the class D notes. These notes could withstand stresses at higher ratings than currently. However, we have limited our rating action based on the notes' overall credit enhancement, their position in the waterfall, and the current economic environment. The class C and D notes' interest remain subordinated after the notes amortization for the rest of the transaction's life. Nevertheless, they still benefit from the support of the reserve fund to meet timely interest and ultimate principal payments.

We expect consumer price inflation to reach 7.9% this year and 3.4% in 2023. Although elevated inflation is overall credit negative for all borrowers, some borrowers will face more constraints than others. Risks may emerge, for example, if inflation worsens more quickly or more severely than currently expected. We consider the borrowers in the transaction to be prime borrowers, meaning they will generally have high resilience to inflationary pressures.
